

Integration is Our DNA

At HYBRID Software, integration of our own software solutions into production environments containing products from other vendors is a critical part of our DNA: it's the "third pillar" of our product offerings:

Web-Based Automation and Job Ticketing

FACELIFT is a web application used to create custom web-based job tickets and integration with MIS, workflow, and web-to-print systems. It supports multiple printing processes (e.g. flexo, offset, gravure) and vertical markets (labels, folding cartons, flexible pack-

aging, etc.). We showcase several examples here but many other applications are possible, including workflow management for trade shops, specialized estimating for digital label printing, etc.

FACELIFT Solution for Folding Carton Printers

HYBRID's FACELIFT solution for folding carton printers provides tools to organize the delivery and preflight of customer files, all prepress tasks required to create print-ready files including the job status, tooling for cutting dies, embossing, braille, and varnish plates, customer approval, separation management, and nested Step and Repeat automation.

This FACELIFT ticket can pull information from an MIS to automate mixed Step and Repeat of folding carton forms.

HIGHLIGHTS

- Dashboard views with individual tasklists for each department in the production chain
- Customizable tickets for order and production management
- Pre-designed best practice tickets for different market segments
