efi Fiery® XF Proofing

Proofing RIP and color management workflow.

Ahead of the curve with the latest industry standards

To minimize the differences between Xrite measurement devices and to ensure highest data exchange quality, all Xrite and EFI devices make use of the XRGA standard. Implementation of M0, M1 (D50), and M2 (UV cut) measurement modes allows ISO 13655–compliant measurements for the best color match under the latest industry-standard viewing conditions — including the new ILS30 for Epson Spectroproofers. Fiery XF Proofing includes the Color Verifier Option that allows you to certify proofs compliant to industry standards like ISO, G7 or FOGRA PSD as well as user-defined standards. This Option also supports job optimization based on standard wedges (like FOGRA or IDEAlliance), or the EFI Dynamic Media Wedge that monitors all image-relevant spot and process colors like flesh tones or spot colors to ensure color consistency.

G7® Support Tools Recognized by IDEAlliance
